

# Time for a real change

iRegMed establishes innovative treatment at health centres and offers the most secure collection of patient data, which is technologically potential – for the well-being of the patient and science.

## Our mission

Construction of an open & organic growing ecosystem, which combines regenerative medical treatment and research with the safety of personal and scientific data through the block chain. In this process, medical and technological cause-oriented treatment is adopted - this gets to the root of the problems.

## Our Commitment

According to research that lasts for years, the iRegMed focus product GOLDIC® has been established with our practising doctors and patients - imore than 2,5000 patients were successfully treated. With the application of regenerative treatment, we will collect, among others, GOLDIC®, a variety of data at special iRegMed centres in order to be able to produce success of the treatment applied.

The medical data at the iRegMed research are transmitted via the centres, the studies applied to the respective treatments and indication fields. The advantage: Few known and non-subsidised treatment receive the chance of their provability or optimisation of their product.

iRegMed technology will enable patients to access their medical data via an electronic patient record in association with a constantly retrievable online portal and to issue the authorisation. Patients fully retain control of their data. We use the block chain technology to guarantee an anonymous and safe data transfer within the iRegMed ecosystem and exclude third-party attacks.

## Our Vision

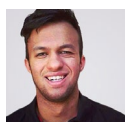

We want to introduce a new structure of the health market in order to enable effective treatment and establish fair insurance system for the patients. Furthermore, we want to replace the framework that is detrimental to innovation and offer an alternative to the insurance and counselling system. The necessity results from the status and is subject to the challenges of the entire branch.

## The Core Team

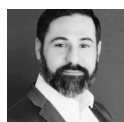

In addition to the six main responsibilities, around 25 specialists currently work from different specialised areas in the iRegMed team.

**Prof. Dr. U. Schneider**  
Chief Executive Officer,  
Founder, Scientist

**Mustafa Sahinli**  
Chief Technology  
Officer
